New KHS-8 Series Headset

July 2014
PMR-IB-14-03

JVCKENWOOD is delighted to announce the release of the new KHS-8NC headset - Noise Cancelling function (TX) has been added

The new KHS-8NC incorporates a new noise cancelling feature included as standard and complements the successful KHS-8BL headset. This headset is ideally suited to users who work in raised noise environments, yet require a low-profile, comfortable headset. Applications requiring light duty headsets, such as the retail and restaurant business sector, business and industry, and entertainment industry amongst others are the potential target markets.

The KHS-8NC complements current Kenwood analogue and digital PMR and PMR446 radios very well and offers increased revenue by focussing on the added value of TX noise cancellation in a small formfactor headset.
