

HIGH DENSITY MODULAR ACCESS POINTS

WHAT MAKES XIRRUS DIFFERENT?

Xirrus High Density Modular Access Points are the only modular and fully upgradeable Wi-Fi Access Points on the market that empower four times faster upgrades in capacity and the ability to upgrade Wi-Fi standards with the click of a mouse. Xirrus High Density modular access points reduce the amount of equipment deployed by 75 percent and decrease total cost of ownership by up to 50 percent versus competing products.

FAST EASY CAPACITY UPGRADES

Add more capacity to Xirrus modular APs with snap in radio options. Xirrus radios are the fastest and easiest way to add capacity to any Xirrus Wi-Fi network by simply increasing the number of radios within the existing casing. Xirrus Modular APs upgrade without complete hardware replacement, reducing costs and extending solution lifespan.

UNPRECEDENTED SCALABILITY

Xirrus High Density Modular APs are available with 2-8 radios and provide up to 8 time the capacity of traditional 802.11ac access points to meet the high density, high capacity demands of today's Internet of Things (IoT).

AT A GLANCE

- Up to 8X the 11ac Wi-Fi capacity of traditional APs
- 11ac Wave 2 upgradable platform protects investment
- Instant 11ac performance boost with TurboXpress
- No central controller, no single point of failure
- Control applications at the edge

HIGH DENSITY MODULAR ACCESS POINTS

LOWER TOTAL COST OF OWNERSHIP

Xirrus High Density APs support hundreds of devices with a single access point, eliminating 75% of Wi-Fi infrastructure. Fewer APs means less cable and fewer switch ports, reducing your total cost of ownership by 30% or more.

HIGHLIGHTS

SIMPLIFIED APPLICATION CONTROL

Deep Packet Inspection (DPI) technology lets you control 1,400 applications at the network edge in every AP, giving you complete application visibility and control. Applications or groups of applications can be prioritized, blocked, or throttled to ensure consistent performance for critical Wi-Fi usage. Policies can be scheduled by device or across the network at specified times and days.

BOOST PERFORMANCE ON DEMAND

Xirrus delivers the only Wi-Fi solution in the world that can instantly increase performance with the push of a button. With TurboXpress you can immediately convert every AP into a 100% 802.11ac AP. Plus, acXpress lets APs automatically adjust to each device's capability to optimize user experience.

POWERFUL SERVICES

Xirrus High Density Modular Access Points enable a powerful suite of services to optimize your Wi-Fi network. EasyPass provides access control for users connecting to the network, whether they are guests or employees onboarding their personal devices. Bonjour Director provides Apple devices easy access to Apple services across the network.

Product Series	Description
XR-2000	Up to 4 radio High Density AP with modular 802.11ac radios, all upgradable to 802.11ac Wave 2
XR-4000	Up to 8 radio High Density AP with modular 802.11ac radios, all upgradable to 802.11ac Wave 2
